I. GENERAL

- A. The first two numbers designate a family; 32 means five level equipment, 33 means eight level equipment.
- B. The alphabetic suffix denotes set variations containing features which would affect interoperation of equipment. These characters are to be assigned in order, but excluding I, O, Q, X, V, and T (See note C below). When single alphas are exhausted, double alphas will be permitted (AA AB etc.)
- C. The character T as the first alpha character denotes a non-Bell original customer. These codes will always be at least double alpha in nature. The character T is not to be used for any other purpose.
- D. A numerical suffix after the alphas, without a slash will denote the dial type. (Bell System machines only)

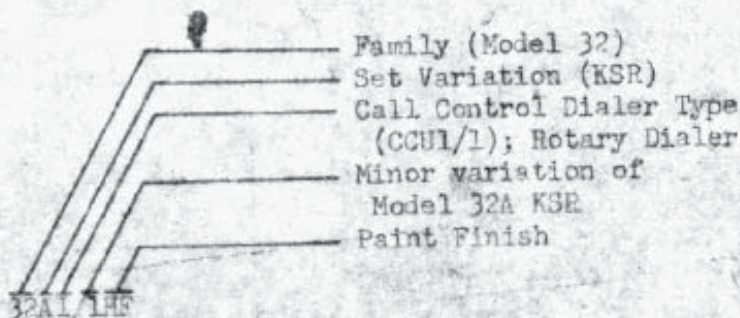

<u>NUMERICAL SUFFIX</u>	<u>DESCRIPTION</u>
1	Rotary Dialer
2	Touch Tone Dialer
3	Touch Tone Card Dialer
4	DC Card Dialer
5	No Dialer

- E. A slash followed by a number suffix will denote minor variations not seriously affecting interoperation. This type of variation could be minor keytop and/or typewheel changes, etc.
- F. This analysis chart is intended to be a cross index to the various coded component assemblies such as printer, keyboard, etc.
