

ST-8000A PARTS LISTS
PARTIAL REVISION
MARCH 11, 1991

Attached are new Parts lists for the following ST-8000A assemblies:

Cable A5W12: 960-80012
Cabinet A5: 910-08005
PCB Installation A6A: 905-08004
Final Assembly A6B: 905-08005

Assembly and Parts Lists for Cable A5W13 (960-80013) has been eliminated. Previous Cables A5W12 and A5W13 have been combined into one cable, assembled using a harness fixture.

Also, at the request of production personnel, the order of construction has been modified so that Cabinet construction (A5, 910-08005) does not require ESD handling. These changes have required shifting of many parts between the various assemblies.

I have not up-dated the master over-all ST-8000A parts list, but the above changes should not result in material changes on the total quantities of a given part.

ONE EXCEPTION: The ST-8000A requires one (1) 423-08000 No. 8 SS flat washer which has not been included on previous lists.

It also appears that the total quantity of small cable ties may be slightly less than previously listed.

I plan to up-date the master parts lists during the next week.
